**Beaked Yucca**

*Yucca rostrata*

**Plant Height:** 10 feet  
**Flower Height:** 15 feet  
**Spread:** 5 feet  
**Sunlight:** ☀️  
**Hardiness Zone:** 6b

**Description:**
A succulent cactus-like shrub with beautiful blue-green spear-like leaves radiating from the center and tall spikes of nodding white flowers in autumn; once established, this variety is trunk forming; good for dry sites, use as a focal accent

**Ornamental Features**
Beaked Yucca features bold spikes of creamy white bell-shaped flowers rising above the foliage from late summer to early fall. It has attractive bluish-green foliage. The sword-like leaves are highly ornamental and remain bluish-green throughout the winter. The fruit is not ornamentally significant.

**Landscape Attributes**
Beaked Yucca is a multi-stemmed evergreen shrub with a more or less rounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration:

- Spiny

Beaked Yucca is recommended for the following landscape applications:
Beaked Yucca makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a ‘thriller’ in the ‘spiller-thriller-filler’ container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
