

Spider's Web Japanese Fatsia
Fatsia japonica 'Spider's Web'

Height: 10 feet

Spread: 10 feet

Sunlight: ● ●

Hardiness Zone: 7b

Description:

This stunning plant has huge palmate dark green leaves that are speckled with white as its principle attraction; perfect for creating a tropical look in the garden; it takes about 3 years for it to show speckling so be patient

Ornamental Features

Spider's Web Japanese Fatsia features showy clusters of white pincushion flowers rising above the foliage in mid fall. It has attractive white-spotted green foliage. The large glossy lobed palmate leaves are highly ornamental and remain green throughout the winter. The fruit is not ornamentally significant.

Landscape Attributes

Spider's Web Japanese Fatsia is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

Spider's Web Japanese Fatsia is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Spider's Web Japanese Fatsia will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in partial shade to shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
